

PROJECT EXPERIENCE PROFILE

Project:

Grant Town Power Station
80 MW Power Plant

Client:

Fru-Con Construction
American Bituminous Power Partners

Location:

Grant Town, West Virginia

PROJECT FEATURES

CTL Engineering, Inc. has provided construction observation, materials testing, surveying, mining, geo-technical and environmental services during construction. Our engineering technicians performed during construction, soil, aggregate, asphalt and concrete materials testing for Fru-Con Construction. CTL Engineering's surveying staff provided construction layout for the contractor.

CTL Engineering is currently providing quarterly review of the mining permits, compaction testing of the flash fill areas. CTL has also provided geo-technical design services during and after construction of the plant. Geo-technical services included slope failure repair and sampling of existing refuse piles for the determination of fuel BTU's.

CTL has performed Environmental Compliance Audits for the power facility, including review of their mining permits.
