

PROJECT EXPERIENCE PROFILE

Project:

Fort Washington Way

Owner:

City of Cincinnati
Hamilton County
Ohio Department of Transportation

Location:

Cincinnati, Ohio

PROJECT FEATURES

CTL Engineering, Inc. provided soil compaction, structural steel, high performance concrete, bolt inspection, visual weld inspection and reviewed the materials certifications for this project. CTL Engineering had up to three (3) technicians, full-time and part-time, on the project site at any given time. The project phase broke out into several contracts, which commenced in 1999 and continued with materials certifications through 2002.

Fort Washington Way connects downtown Cincinnati's east and west sides. When it opened in the 1960's, Fort Washington Way could safely accommodate 90,000 vehicles per day. When last calculated Fort Washington Way was exceeding its original construction limit by supporting more than 120,000 vehicles each day.
