

PROJECT EXPERIENCE PROFILE

Project:

Williamstown Welcome Center

Owner:

West Virginia Department of Transportation

Location:

Williamstown, West Virginia

PROJECT FEATURES

CTL Engineering provided quality assurance and construction monitoring for the construction of the main building facility, a maintenance building, parking lots, dumping station, landscaping, site and interstate lighting along with road signage for the new Williamstown Welcome Center. The Center is located approximately ¼ mile off the Williamstown interchange off of I-77 in Wood County, West Virginia.

A unique feature of the Welcome Center is the “West Virginia Vision Theater”. The theater utilizes a touch screen menu where visitors are offered an insight to the state’s many points of interest, transportation systems, state parks and recreational areas to visit and stay. The Welcome Center is unique with its alternating high peak roof lines and natural stone facade emulating West Virginia’s beautiful mountainous terrain while providing the necessary comfort facilities for the general public.
